

Data Resources

In each of our applications, the mini-grant funder will ask you to provide support as to why your organization, group, or worksite chose the intervention you did. Using data as a means to assess the need for an intervention or program is an important part of the mission of the West Virginia Bureau for Public Health's Division of Health Promotion and Chronic Disease (HPCD) and the CDC. Below are some data sources to help your organization, group, or worksite explain why you chose your intervention and why you believe it will work.

Data Set	Type	Scope	Link
County Health Rankings	Health	County	https://www.countyhealthrankings.org/explore-health-rankings
America's Health Rankings	Health	State	https://www.americashealthrankings.org/
